per hundred

Scale for Vertical Channel (MC-1)

Universal Matrix Cabinet

The Universal Cabinet weighs 690 lbs., packed for shipment, and 610 lbs. unpacked.

The base of the Universal Cabinet measures 27" x 30". With the cases open, the cabinet measures 27" x 38". The space case has been omitted to save space so the height of the cabinet and the angle of the top of the cabinet are the same on the Universal Cabinet as on the angle-top cabinet, although the matrix cases are much larger.

The inside dimensions of the matrix cases of the Universal Cabinet are 24" x 28".

The cases are equipped with a combination label holder and case handle. The case slides are equipped with roller bearings and so constructed that there is practically no sag when a full case is completely open. The cases may be opened or closed easily, regardless of the number of matrices in the case, without lifting the end of the case as is often necessary with overloaded cases of type cabinets and of other large matrix cabinets on the market.

There is ample room in each case for a font and a sortis font of the bolder extended faces of 1 1/4" and 1/8" matrices and at least two fonts of most faces and point sizes of the regular 1/8" matrices. The cases of the Universal Cabinet will hold approximately 70% more 1/8" matrices and approximately twice as many 1 1/4" matrices as cases of our regular matrix cabinet. This will be of particular interest to newspaper users setting streamer lines in Ludlow typefaces.

LUDLOW MATRIX CABINETS

There is a long vertical channel on the inner side of each matrix case. As many as ten horizontal removable partitions may be placed in this channel, for the accommodation of superior figures or other extra matrices intended for use with a particular font. The scale is provided, when specified, for attaching along-side this channel for use with the single-shaft-casting plan of producing long lines from $1\frac{1}{4}$ " matrices.

Tool Drawer. A large tool drawer with a separate compartment for Ludlow molds is in the usual position. When the Universal Cabinet is packed for shipment, the copy holder, micas and removable brass partitions are placed in the Tool Drawer.

Stick Rack. The stick rack, sold as extra equipment, accommodates ten sticks and is attachable to the front of the cabinet.

Sliding Copyholder. The sliding copyholder, sold as extra equipment, is the same as the sliding copyholder for the regular matrix cabinet.

Light Fixture. The light fixture, sold as extra equipment, is the same as the light fixture for the regular matrix cabinet.

Space Trays and Division Quad Trays. These trays, for use on top of cabinet, are to be sold separately as extra equipment, in accordance with the particular requirements of the composing room in which the cabinet is to be used.

Italic Filler Blocks. These are to be sold separately for each Italic body matrix font. They prevent Italic body matrices from falling over or binding on the sides of the cases, and may be easily slipped into position or removed.

Angle-Top Matrix Cabinets with Standard $\frac{5}{8}$ " Cases
